

PIXELMESH

pixelmesh brings
companies and individuals
to the **next level**
of internet presence

We combine technical expertise with creative vision to achieve your specific business objectives.

Since 1996 Pixelmesh has been providing innovative new media and technology solutions that help companies and individuals establish and fortify their online identity.

From Branding and User Interface Design to Database Development, Pixelmesh combines technical expertise with creative vision to achieve your specific business objectives.

Pixelmesh utilizes talents of Chicago based designers, web developers, artists, writers and marketers.

We provide high quality and innovative solutions for the most demanding clients. Our team of highly trained and dedicated professionals can achieve results in the cost-efficient, reliable and timely fashion.

What makes Pixelmesh a better choice?

Pixelmesh is a full-service, highly creative and competitively priced alternative to big agencies. We offer levels of technical expertise unmatched by most of the traditional advertising houses. With Pixelmesh you get assurance of unique, unparalleled design and timely, on budget delivery. Your projects will be expertly managed from start to finish, minimizing development issues for you. When you hire Pixelmesh, you get a technical expert, web marketing advisor, and a trusted friend.

Our top priority is to help our clients achieve their business objectives through a professional online presence

PIXELMESH combines state-of-the-art technology, knowledge of Web trends, and proven design talent to create innovative and effective Web presences - custom built to your specifications.

Our services include:

Web Site Design

Pixelmesh delivers web site designs that engage audiences and achieve results. Whether you need a site with e-commerce functionality or simply an informational page, we can create one that suits your business objectives.

Web Development

We take pride in offering a wide range of expert web development services, utilizing different web programming technologies for several hosting platforms.

Database Programming

Pixelmesh can create robust databases to turn your web site into a powerful, interactive tool. Our databases ensure stable environments, excellent management tools, and flexibility.

E-commerce

If you're interested in selling your products online, Pixelmesh will help you build your store, then help you advertise your new store, both online and through traditional advertising means.

Search Engine Optimization

Pixelmesh specializes in helping our clients improve their search engine rankings by researching appropriate keywords

Identity Design

Refresh your web site and other marketing materials with a new look, designed by Pixelmesh's team of identity design specialists.

Print Design

Pixelmesh's identity design specialists will help you keep your brand in tact, by designing business cards and stationery, postcards, and brochures that all have a consistent look and feel.

User Interface Design

To increase the satisfaction of your web site's users, you need an expert, user-centered interface that Pixelmesh can provide. We design web sites with usability in mind-from the ground up.

Web Hosting

Clients who purchase Pixelmesh's web site design services can also take advantage of our superb web hosting services. Solutions are also available for our clients who need e-commerce capabilities.

At Pixelmesh, we know there's no time to waste in getting your web presence up and running.

We've streamlined our creative and development process into the following 4-stages:

1

Vision

Our process starts with client consultation, where we connect with your company's culture, services and/or products, branding, business objectives, and expectations. With this vital information, we construct the foundation of your new digital solution, determining visual and technical needs, as well as goals and objectives.

2

Design

After devising potential solutions, we develop site architecture and navigation structure. We then proceed with the design of user interfaces, graphic content and multimedia elements. At this stage, we offer secure access to works in progress for client review and feedback.

3

Development

With client approval of the design direction, we begin Web development, coding and implementation of back-end technology. Your existing database (or one we've created) is then integrated with the site. Advanced multimedia and interactive production are finalized, and your content is injected into the site. At this point, you have beta site access.

4

Launch

After final approval, your site is transferred to its final destination on your (or our) server. Quality Assurance testing is conducted and any resulting alterations are made, your site is then set for deployment. Once live, we will monitor the site for complications.
